Chapter 2: From Waste to Wealth - The Untapped Goldmine

While most people see waste as a nuisance, entrepreneurs view it as a resource waiting to be transformed. Plastic bottles, scrap metals, food waste, and even electronic components have potential for profit. With creativity, discipline, and the right knowledge, you can build an enterprise that not only earns you income but also helps clean the planet. The secret lies in understanding your local environment - what waste is most available, and what industries require recycled or upcycled materials. From compost making to eco-brick production, the opportunities are vast. This chapter dives into the mindset shift needed to start your journey - one that sees beyond the mess and focuses on the mission: transforming waste into wealth.
